

DIGITAL LOTO PROGRAM · OSHA 1910.147

Every machine. Its own procedure. One scan away.

Tegis Safety replaces paper lockout binders with one live procedure library. **Write** machine-specific procedures, **approve** them, and **put them at the machine** with a QR code any phone can open, on every shift, for every contractor.

- ✓ Opens in any phone browser. No app, no login to read.
- ✓ The QR code always opens the current approved version.
- ✓ One-click PDF per asset for audits and offline use.

STEP 1
Write**STEP 2**
Approve**STEP 3**
Tag**STEP 4**

apps to install. Technicians scan with the phone camera they already carry.

\$0

per-user fees. Every operator, shift, and contractor can read.

10

procedures free, forever. Create an account and start today.

17

energy types built in, from 480 V AC to steam, gravity, and radiation.

Getting the right procedure to the machine is the hard part.

	WITH PAPER BINDERS	WITH TEGIS SAFETY
Finding it	✗ Walk to the office and search the binder	✓ Scan the QR code on the machine itself
Right version	✗ Old printouts linger on the floor	✓ Every scan opens the approved version
Isolation points	✗ Breaker numbers live in someone's head	✓ Photos sit on the step that names them
Making changes	✗ Reprint and redistribute the binder	✓ Edit once; the QR code and PDF follow
Audit requests	✗ Assemble a binder the night before	✓ Per-asset PDF, one export away
Nights & contractors	✗ Call EHS, or go without	✓ Open it on any phone, no account needed

Everything a technician needs, on one record per machine

BUILT FOR THE WHOLE PROGRAM

Write it, approve it, tag it, prove it

Everything below is included on every plan, from the free tier up.

 Guided procedure builder Fields for scope, shutdown, energy sources, isolation, PPE, verification, and restart, in a consistent order.	 Clone similar machines Start from a similar asset, then review and change its equipment-specific details.	 Photos at isolation points Disconnect, valve, and breaker photos attached to the exact step that names them.
 Print your own QR labels Standard sheets or thermal rolls, at no charge. One label per procedure; double-linking is blocked.	 Relink when equipment changes Move a label to a new procedure without touching the procedure or its approval history.	 Roles & approvals Authors, reviewers, and approvers, with sign-off recorded by name instead of remembered.
 Shared steps stay in sync Link a shared isolation step across procedures. Update it once and every affected PDF regenerates.	 Flag for review Flagged procedures stay highlighted in every list until someone resolves the finding.	 Multi-site organization Company, then site, then asset. Each plant sees its own equipment; corporate EHS sees everything.

ENERGY TYPE CATALOG

17 hazardous energy types, ready to use

Each type carries its own icon, unit of measure, and tag prefix, so every procedure at every site reads the same way.

Electric AC

Electric DC battery

Chemical

Fuel gas

Fuel liquid

Hydraulic

Compressed gas

Pneumatic

Vacuum

Gravity

Moving parts & nip points

Spring / stored energy

Water

Hot water

Cold water

Steam

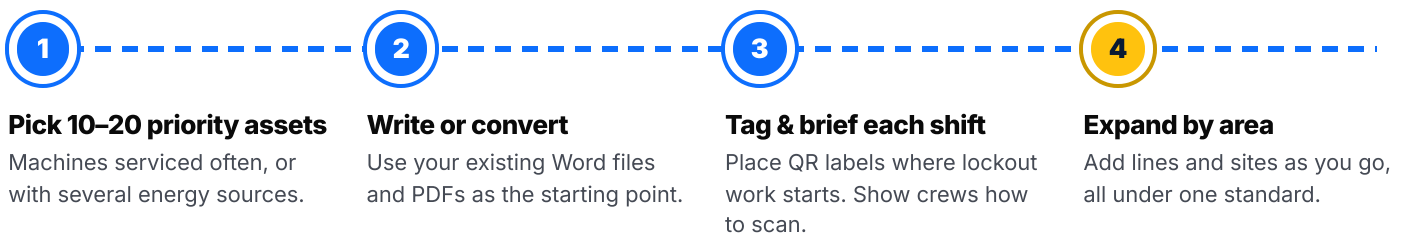

Radiation

Tag prefixes & units

ROLLING IT OUT

Start with one line, not the whole plant

WHO IT'S FOR

One library for everyone who touches the procedure

Facilities & EHS teams

Own your workspace and data, keep procedures current across every site, and decide who has access.

Safety consultants

Write procedures for many client facilities from one account, then hand each client its own workspace.

Technicians & contractors

Scan the code on the machine to read its current approved procedure. Nothing to install or log into.

SIMPLE, PUBLISHED PRICING

Start free. Scale by procedures and sites.

Free

\$0 forever

10 LOTO procedures
1 site

Starter

\$80 / month

250 LOTO procedures
2 sites

Pro

\$300 / month

1,000 LOTO procedures
5 sites

Enterprise

Custom

1,000+ procedures
5+ sites
Annual invoicing

✓ Unlimited users ✓ No per-seat fees ✓ QR scanning ✓ PDF export ✓ Approval workflow

Need your procedures written?

A Tegis partner walks your equipment with your maintenance leads, documents each energy source and isolation point with photos, and writes the procedures into a workspace your facility owns.

Safety consultant?

\$10 per client procedure

Activates one procedure for 10 years, including continued editing. Separate from monthly plans.

QUESTIONS WE HEAR A LOT

No Wi-Fi at the machine?

Post the exported PDF at the asset. It carries the same QR code, which opens the live version wherever there's a connection.

Can we import what we have?

Yes. Existing Word files and PDFs are the starting point. Ask about migration help during a demo.

Do we need new tags or printers?

No. Print QR labels on a standard or thermal printer, and keep using your physical locks and tags.

Start with one machine.

Book a walkthrough with your own equipment, ask about a multi-site rollout, or create a free account today.
